

How to Compile and Run a C Program on Ubuntu Linux

Bheemappa H
MSRIT, Jan-2020

This document shows how to compile and run a C program on Ubuntu Linux using the gcc compiler.

Step 1. Open up a terminal

- Go to “Dash tool “ (located as the left topmost item)
- Search for the terminal application
- Open up a terminal by clicking on the icon.

Or

shortcut key to open terminal
press **CTRL+ALT+t** to open terminal

Step 2. Use a VI editor to create the C source code.

Commands

1. Type the command

vi hello.c

SCREEN

2. hit enter

hello.c created

3. Press **I** or **Insert** button to enter text in hello.c program (Insert mode)

after press(I or Insert button)

3. then enter the C source code below:

```
#include <stdio.h>

void main() {
    printf("Hello World\n");
}
```

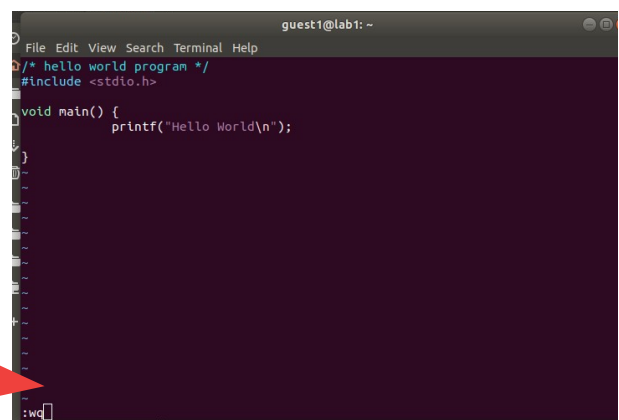

4. SAVE AND EXIT (save program and quit)

press ESC button then type

“:wq”

hit enter

Write and quit

Step 3. Compiling C program

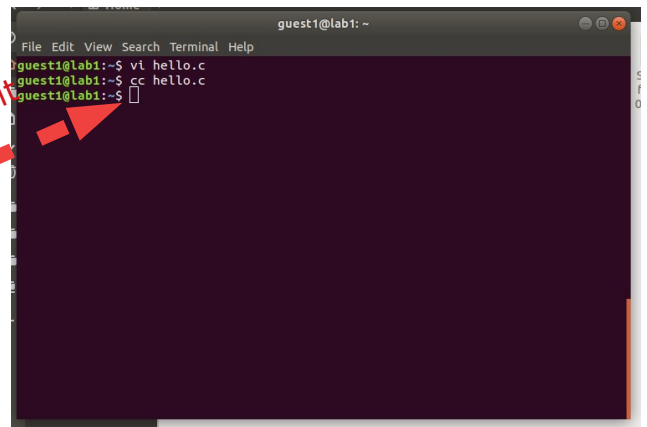

type

cc hello.c

(after **cc hello.c** , if the prompt appears it means program compiled successfully.)

(compiler will compile the file **hello.c** and creates to an executable called **a.out**.)

Write and quit

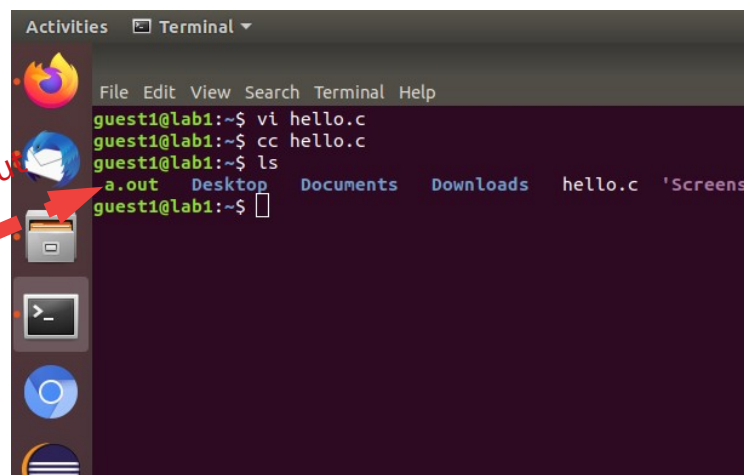

```
guest1@lab1: ~  
File Edit View Search Terminal Help  
guest1@lab1:~$ vi hello.c  
guest1@lab1:~$ cc hello.c  
guest1@lab1:~$
```

Step 4. Execution of hello.c C program

1. type **ls**

(to check the compiled file(a.out) created not)

Object file-a.out

```
Activities Terminal  
File Edit View Search Terminal Help  
guest1@lab1:~$ vi hello.c  
guest1@lab1:~$ cc hello.c  
guest1@lab1:~$ ls  
a.out Desktop Documents Downloads hello.c 'Screenshots'  
guest1@lab1:~$
```

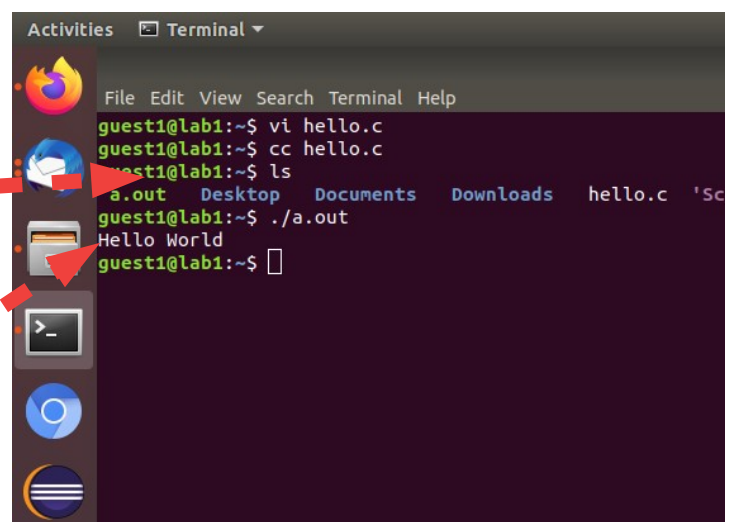

2. Execute the program

type :

./a.out

(hit enter to see the output)³¹

output

```
Activities Terminal  
File Edit View Search Terminal Help  
guest1@lab1:~$ vi hello.c  
guest1@lab1:~$ cc hello.c  
guest1@lab1:~$ ls  
a.out Desktop Documents Downloads hello.c 'Screenshots'  
guest1@lab1:~$ ./a.out  
Hello World  
guest1@lab1:~$
```
